

LTA - your competent partner for complete applications in the field of air cleaning

Suction of silicone vapours, integrated air-cleaning and heat recovery at tempering ovens

Your advantages

- Approx. 80% heat recirculation to the tempering oven by heat exchanger
- Separated air can be emitted in the hall or in the outside air after electrostatic air-cleaning
- Optimal price-performance ratio
- Reduction of the running- and energy costs owing to newest technologies and innovations
- By better air-quality raise of the employee-satisfaction and reduction of the risk of respiratory tract diseases which lead to less sick days

Suction of oil smoke and aquatensid at hardening machines

Your advantages

- Efficient gathering and cleaning of vapours, gases, smoke and burning-particles with an electrostatic LTA-airfilter
- Recirculation to the hall air
- No discharge of coloured vapours and gases
- Suction of aquatensid with a mechanical LTA-airfilter
- Optimal price-performance ratio
- Reduction of the running- and energy costs owing to newest technologies and innovations
- By better air-quality raise of the employee-satisfaction and reduction of the risk of respiratory tract diseases which lead to less sick days
