LARGE FILTRATION SYSTEM

COOLANT MIST

AC 20000

- Single-stage or multiple-stage version for the separation of coolant mist
- Filter elements are compatible with our AC 1000 & AC 3000 filter series, which means low maintenance costs
- Low energy consumption due to air stream-optimized construction
- Universal use for oil & emulsion mist
- High-voltage generator pre-programmed with two voltage levels -> oil or emulsion
- Service door can be optionally opened to the left or right
- Various options available
- Ability to handle larger areas or centralized locations.
- Optional CIP (Cleaning in Place) cleaning system
Function: the individual filter levels are cleaned via built-in full-cone nozzles. This takes place without chemical additives or diluted solutions and offers the re-conditioning of cleaning oil using a cleaning centrifuge
